

Formal share rises down the chain: $\varphi_f^{\text{brk}} < \varphi_f^{\text{smelt}} < \varphi_f^{\text{refine}} < \varphi_f^{\text{mfg}} < 1$ (informal never vanishes)

Legend: $\longrightarrow$ domestic flow $\cdots\cdots\longrightarrow$ informal $\rightarrow$ formal (sold up) $\longrightarrow$ trade — formal chain only $\cdots\cdots\longrightarrow$ anchor (not a flow)
